HTML + CSS Overview

Everything that you see when you open the internet

- HTML = raw data that the webpage is built of (text, links, cards, lists, buttons)
 - o Content and layout
 - o Hypertext markup language (scripting!!)
 - o HTML5
- CSS adds style (color, font, position)
 - o Style sheet language (cascading style sheet)
 - o Exists to improve presentation of HTML elements
 - o Static* visual effects
 - o CSS3
- JS is the programming language behind the site
 - o Interactive elements

Basic websites: Bootstrap

Backend: Python, PHP, Ruby, SQL

Massive API database: <https://devdocs.io/>
